Knowledge Mobilisation

Foundry is a strategic insight and engagement consultancy that helps bring water infrastructure ideas to life. We bridge the gap between technical solutions and society through effective communication.

Our unique combination of communication techniques and water industry knowledge enables us to get to the heart of the issue quickly, define the problem and co-create effective solutions to facilitate practice change.

We forge ahead!
Expert knowledge is critical to solving the increasingly complex problems we face today.

But how do we ensure knowledge is valued, mobilised and disseminated so organisations are empowered to influence practice change?

**Our vision is to fundamentally improve the way we live by bridging the gap between technical solutions and society.**

Foundry helps design and deliver activities with industry or community users to develop products, disseminate knowledge and increase impact.

We develop tools and products for industry or research organisations to facilitate knowledge mobilisation and change industry practice.

We individually tailor a combination of assessment, product development and engagement tools for each client that enable organisations to:

- Ensure expert knowledge is reaching the right people
- Achieve adoption of new approaches
- Demonstrate the impact of your knowledge and innovation

Foundry helps organisations achieve adoption of best practice approaches.

**WE DELIVER**

1. **Opportunity Stocktake**
   A collaborative exploration and prioritisation of existing engagement opportunities to get your knowledge out there.

2. **Industry Engagement**
   Working with industry to develop products or create opportunities to enhance the translation of knowledge into practice.

3. **Building Water Sensitive Cities**
   Using industry-leading knowledge and tools from the CRC for Water Sensitive Cities to benchmark performance, establish a vision, and inform strategies and plans.

---

The work Foundry does through the Water Sensitive City (WSC) Index benchmarking has had a big impact in Western Australia. Their approach gets diverse people in the room for the first time and expands the areas of concern, interest and stewardship to beyond water to include liveability and wellbeing. The impact of Foundry’s work with the WSC benchmarking will continue to grow as Councils get on board and discover a shared language to talk about and plan for a water sensitive future.
